

Progress in the implementation of the global strategy to accelerate the elimination of cervical cancer as a public health problem and its associated goals and targets for the period 2020–2030

Agenda Item 14.1 (e)

Thank you Chair, honourable members, distinguished delegates.

The IAPO welcomes progress report on the implementation of the global strategy to accelerate the elimination of cervical cancer as a public health problem and its associated goals and targets for the period 2020–2030

IAPO's personalised cancer care approach recommends that Member States to speed up achieving universal health coverage and resilient health systems integration and overcome the delays and disruptions in HPV vaccination, diagnosis and early treatment in cervical cancer services reported by WHO during the current pandemic and health emergencies.

IAPO hopes a personalised cancer care approach speeds up the elimination of cervical cancer in a respectful and effective manner for all women.
